

Group symbol: **2**

Team: **1**

Project title: **ListItUp**

Team members (*filled by PM, Team Leader*):

No	Name	Surname	Student ID	Role
1	Carmelo	Romero Pérez	293936	<i>PM, Team Leader</i>
2	Álvaro	Puebla Ruisánchez	293867	<i>Team member</i>
3	Carmen	Gutiérrez Sánchez	293906	<i>Team member</i>
4	David	Sosa Domínguez	293885	<i>Team member</i>
5	Diego	García Agrelo	293939	<i>Team member</i>
6	Miryam	Merchán León	293907	<i>Team member</i>

2. Requirements specification (S2)

2.1. Functional Requirements Specification

In this section, provide the table for functional requirements, including symbol, type (e.g. business logic, user interface, data exchange, etc.) description, significance (MoSCoW) and source (Stakeholder).

The requirements are structured around five domains: user account management, list and item management, social interaction, content discovery, and platform administration. Must-have requirements constitute the minimum viable set for the pilot release; Should-have requirements extend the experience without blocking the first release.

MVP Functional Requirements: core features (Must = critical, Should/Could = less critical)

Symbol	Type	Description	Significance	Source
FR1	Business Logic	Create a List: Authenticated users can create and publish a curated list with a title, description, cover photo, and public/private visibility.	Must	E1 - Casual Users E2 - Verified Creators
FR2	Business Logic / Data Management	Manage Items: Users can add, edit, reorder, and delete items within a list. Each item supports a title, short description, external URL, and optional photo.	Must	E1 - Casual Users E2 - Verified Creators
FR3	Business Logic	Discovery and Search: The platform offers a category-based feed of public lists and a keyword search filterable by category and sortable by relevance or recency.	Must	E1 - Casual Users E2 - Verified Creators
FR4	Business Logic / Social Interaction	Social Interactions: Users can follow others, like lists, post comments, and save lists to a personal collection.	Must	E1 - Casual Users E2 - Verified Creators
FR5	Business Logic / Moderation	Reporting and Moderation: Users can report lists, items, or comments. Administrators can review reports and delete any content from a dedicated panel.	Must	E1 - Casual Users E3 - Administrators
FR6	Data Exchange / Notifications	Notifications: The system sends in-app notifications for likes, comments, and new posts from followed creators. Key events also trigger email notifications via a third-party provider.	Should	E1 - Casual Users E2 - Verified Creators E4 - API Providers
FR7	User Interface / Analytics	Creator Analytics: Verified creators have access to a private dashboard showing per-list statistics: views, saves, likes, and link clicks, updated daily.	Should	E2 - Verified Creators

2.2. Non-Functional Requirements

In this section provide the table for non-functional requirements that includes symbol, type (e.g., efficiency, standards, constraints, etc.), description, significance (MoSCoW) for the project, source (Stakeholder). Each requirement should also have specified a verification method - a description of a confirmation method whether a requirement has been fulfilled or not in the most measurable and objective way.

Key non-functional requirements derive from the project's technological, legal and organizational context. These include security (campus SSO, encryption), performance and scalability, accessibility and audit compliance, and deployment constraints. Metrics and verification methods are specified to ensure measurable quality.

Symbol	Type	Description	Significance	Source	Verification method
NF1	Performance / Efficiency	Page Load Time: Primary pages must fully render within 3 seconds on a standard broadband connection, measured as Time to Interactive (TTI).	Must	E1 - Casual Users E2 - Verified Creators	Verification: Run Lighthouse on the three core pages from a cold cache; all TTI values must be below 3 seconds.
NF2	Reliability / Availability	System Uptime: The platform must maintain at least 99.5% uptime throughout the pilot period.	Must	E1 - Casual Users E3 - Administrators	Verification: Monitor uptime via UptimeRobot with 1-minute polling; compute the monthly ratio at the end of the pilot and confirm it meets or exceeds 99.5%.
NF3	Security	HTTPS Encryption: All client-server communication must be encrypted using TLS 1.2 or higher. No sensitive data may be transmitted over plain HTTP.	Must	E1 - Casual Users E2 - Verified Creators	Verification: Use a browser devtools network tab to confirm all requests use HTTPS. Run an SSL Labs test on the deployed domain and verify a grade of A or higher.
NF4	Legal / Privacy	GDPR / Legal Compliance: The platform must comply with GDPR/RODO: users must be able to access, export, rectify, and erase their personal data. A cookie-consent banner must be displayed on first visit before any non-essential cookies are set.	Must	Legal - GDPR E1 - Casual Users	Verification: Manually confirm that account deletion removes all personal user data. Verify that the cookie consent banner appears before any non-essential cookies are set. Confirm users can export their data on request.
NF5	Usability	Task Completion Rate: At least 80% of pilot users must be able to complete	Must	E1 - Casual Users E2 - Verified Creators	Verification: Run a manual test suite across all target browsers and

SSD 2026 - Project Report S2

		the core create-and-publish-list task without any staff assistance, measured during moderated usability sessions.			viewports. Conduct a usability session with at least 5 first-time users and record the task completion rate (target $\geq 80\%$).
NF6	Compatibility / Responsiveness	Cross-Browser Responsiveness: The UI must render correctly and be fully functional across the two most recent stable versions of Chrome, Firefox, and Safari on both desktop and mobile viewports.	Must	E1 - Casual Users E2 - Verified Creators	Verification: Run the manual test suite on the two latest versions of Chrome, Firefox, and Safari on desktop and mobile. All core user flows must pass with no layout breaks or functional errors.
NF7	Security / Authentication	OAuth 2.0 Social Login: The platform must support user authentication exclusively via OAuth 2.0 (Google and GitHub). No platform-specific passwords are stored or managed.	Must	E1 - Casual Users E2 - Verified Creators E4 - API Providers	Verification: Attempt to register and log in using a Google and a GitHub account. Confirm the session is established without any platform password. Verify that no plain-text credentials are stored in the database.
NF8	Usability / User Management	User Profile Management: Each user must have a publicly visible profile containing a username, biography, and profile picture. Verified creators must additionally display a verification badge on their profile.	Must	E1 - Casual Users E2 - Verified Creators	Verification: Inspect a registered user profile: verify that username, biography and profile picture fields are displayed. Log in as a verified creator and confirm that the verification badge appears on the profile page.

2.3. Use Case Diagram

You should prepare the use case diagram in UML 2.5 depicting the roles of stakeholders who are users of the project. It should also present the high-level concept of system usage divided into modules. Use case diagram should not cover common business logic (e.g. registration and logging in, CRUD operations).

Actor	Description
Casual User (E1)	A registered standard user who browses, creates, and interacts with content. Primary actor across all four modules.
Verified Creator (E2)	Extends Casual User with exclusive access to the Creator Analytics Dashboard and the ability to pin lists to their profile. Modelled using <<extend>> relationships.
App Administrator (E3)	A privileged operator responsible for platform moderation. Interacts exclusively with the Administration module.
Third-Party API Provider (E4)	An external system actor representing services consumed by the platform: OAuth provider, Open Graph metadata service, image host, and transactional email provider.

Module	Use Cases	Actors
List Management	UC1: Create and Publish List - User creates a curated list with title, description, cover photo and visibility. UC2: Item CRUD Management - User adds, edits, reorders and deletes items within a list. UC3: Set List Visibility - User toggles a list between public and private. UC4: Pin List to Profile <<extend>> - Verified Creator pins a list to the top of their profile page. UC5: Enrich Item Link via Open Graph <<include>> - System fetches Open Graph metadata from an item URL to populate preview image and title automatically.	UC1-UC3: Casual User, Verified Creator UC4: Verified Creator only UC5: Third-Party API Provider (system)
Social & Discovery	UC6: Browse Category Feed - User browses public lists organized by category on the home feed. UC7: Search Lists and Items by Keyword - User searches for lists or items using free-text keywords. UC8: Follow / Unfollow a User - User subscribes or unsubscribes from another user to control their feed. UC9: Like a List - User	UC6-UC11: Casual User, Verified Creator UC12: Verified Creator only

	marks a list as liked. UC10: Comment on a List - User posts a text comment on a list. UC11: Save List to Personal Collection - User saves a list to their own profile collection for later reference. UC12: View Creator Analytics Dashboard <<extend>> - Verified Creator views per-list statistics (views, saves, likes, link clicks).	
Notifications	UC13: Receive In-App Notification - User receives a real-time in-app alert for likes, comments or new posts from followed creators. UC14: Receive Email Notification <<include>> - System sends an email digest for key events via a third-party email provider.	UC13: Casual User, Verified Creator UC14: Third-Party API Provider (system)
Administration	UC15: Review Content Report Queue - Administrator reviews the queue of user-submitted content reports awaiting moderation. UC16: Delete List / Item / Comment - Administrator removes flagged or inappropriate content from the platform. UC17: Submit Content Report - User reports a list, item or comment that violates platform guidelines.	UC15-UC16: App Administrator UC17: Casual User, Verified Creator (initiates); App Administrator (processes)
