- The exam result is expressed as a percentage and constitutes an element of the assessment for a group of courses, in accordance with the rules presented below.

3

Stakeholders

Stakeholders

A **stakeholder** is any person or representative of an organization who has a stake – a vested interest in the outcome of a project. A stakeholder can be an end user, a purchaser, a contractor, a developer, a project manager, or anyone else who cares enough or whose needs must be met by the project.

3.1

Stakeholders

General application domain stakeholders

Stakeholders

General application domain stakeholders

General application domain stakeholders – stakeholders whose primary interest is neither the projects which develop software (from domains, via requirements to software design), nor the products evolving from such projects.

Instead we mean stakeholders from typically non-IT business areas.

3.2

Stakeholders

Software development stakeholders

Stakeholders

Software development stakeholders

By a turnkey **software development stakeholder** we understand a stakeholder from the software developer or from that client domain.

3.3

Stakeholders

Stakeholder perspectives

Stakeholders

Stakeholder perspectives

Stakeholder perspective – a view that may differ from one stakeholder group to another stakeholder group of the same domain.

Thank you for your attention
