- The exam result is expressed as a percentage and constitutes an element of the assessment for a group of courses, in accordance with the rules presented below.

3

Introduction

Introduction

Domain:

- ▶ an area of human activity,
- ▶ an area of semi- or a fully mechanized activity,
- ▶ an area of nature that can be described, and. parts or all of which that can potentially be subject to partial or total computerization.

The **domain of the IT system** its subject area.

The domain can be considered both in terms of

- ▶ static structure and
- ▶ dynamics, i.e. behaviour.

4

Domain description

Domain description

Domain description – an indicatively expressed description of the properties of the following domain facets:

- ▶ the intrinsics (the basic, invariant, and core),
- ▶ the enterprise (business, institution) process,
- ▶ the technology supports,
- ▶ the management and organization,
- ▶ the rules and regulation,
- ▶ the human behaviour, and
- ▶ possibly of other facets of the domain.

Domain description:

- ▶ Description of phenomena in the application domain that can be observed.
- ▶ Definitions of concepts that abstract these phenomena.

5

Domain model

Domain model

The **domain model** refers to the concept of a simplified description of a fragment of reality narrowed down to a given domain.

Graphical representation – e.g. UML *class diagram*.

6

Non-Formal and semi-formal domain description

Non-Formal and semi-formal domain description

The **semi-formal description** assumes the use of a specification method that allows for partial formalization, e.g. in the form of dictionaries based on the SBVR standard.

Informal description implies the use of natural language.
