Introduction

Introduction

One of the greatest challenges of project management is **managing time efficiently**.

Time management is defined as the time spent and the progress made over the project.

Managing time is an important part of task management. It helps to break down projects, assigning tasks, and completing the projects on time.

4

Main processes in project time management

Main processes in project time management

Six main **processes** in project time management:

- 1 Creating a project plan
- 2 Project schedule management process
- 3 Define the project activities
- 4 Determine dependencies
- 5 Sequence activities
- 6 Estimate durations and resources

4.1

Main processes in project time management

Project schedule management process

Main processes in project time management

Project schedule management process

Benefits:

- progress
- tasks, dependencies, and deadlines
- concerns
- task relationships
- identify issues early

Main processes in project time management

Project schedule management process

Main **types** of schedules:

- *Master* project schedule.
- *Milestone* schedule or summary schedule.
- *Detailed* project schedule.

Main processes in project time management

Project schedule management process

Solid project schedule.

- ➊ Input from stakeholders.
- ➋ Reference past projects.
- ➌ Keep risk in mind.
- ➍ Consider any non-work time.
- ➎ Define the critical path on your project.
- ➏ Record scheduling assumptions.
- ➐ Include project milestones.
