

WSP - Web System Programming

Laboratory L01 – HTTP

Introduction.

Understand how HTTP output works, basics of html.

Tasks list

1. For the selected website, show the `curl` command. Show the content of the headers and the response body.
2. For the selected website, show the operation of the developer tools of the selected browser. Show what requests the browser has sent and what responses it has received. Present the type of request, its header and body. Do the same for the response.
3. Find the page using the query string in the URL and show the action by typing a new query string from the keyboard.
4. Find the page with the form that submits the data in the body of the POST type request. Demonstrate that this is indeed the case.
5. Create your own valid website (or more pages), which will include:
 - a. title,
 - b. tags for different types of headers,
 - c. text in paragraphs,
 - d. comments,
 - e. Linked:
 - i. other websites,
 - ii. pictures,
 - iii. some zipped file,
 - iv. e-mail adress
6. Show with the selected validator that the page is correct.

Date I: Meeting 2 (50 points)

Date II: Meeting 3 (40 points)

Date III: Meeting 4 (25 points)
