Laboratory 04 – CSS 1

Styling in CSS3 - part 1

The operation of HTML and CSS should be checked on five browsers: Chrome, Microsoft Edge, Firefox, Opera, Safari.

Please create a site with several HTML 5 compliant pages with a reference to an external CSS3-compliant style sheet. All CSS rules, except point 2, should be placed in the external one style sheet.

1. The start page contains links to pages that contain several paragraphs one after the other text, a list of references, a table, and a form. Coding all pages please set as utf-8. Each page has its own unique title and is stamped metadata, in particular a description and keywords (for the purposes of positioning).
2. Present various options for embedding CSS rules on the page.
3. Demonstrate the practical use of different ways to change the text size (em, px, pt, %).
4. Present various ways of setting the page background - its position, repeatability, constrain (e.g. repeat to half the page height) and stretch (background-color, background-image, background-repeat, background-attachment, background-position, background).
5. Show the different ways of defining CSS selectors and their use on page. Discuss in what situations it is best to use them (identifiers, classes, nesting, >)
6. Present practically all box-model and positioning properties elements on the page (margin, padding, width, height, position: (absolute, relative, static, fixed), left, right, top, bottom, float, clear) .
7. Present various ways of text formatting and setting its width (font-weight, font-style, font-variant, font-size, line-height, font-family).
8. Write a CSS rule using the attribute: border-width, border-style, border-color.
9. Present various possibilities of table styling (using in selectors tr, td etc.).

Deadline 1: meeting 6 (max 100 points)

Deadline 2: meeting 7 (max 80 points)

Deadline 3: meeting 8 (max 50 points)
