

WSP - Web System Programming

Laboratory 09 – Spring 3 (for two meetings)

Spring - part 3, implementation of a shopping cart along with authentication and authorization

Do the following tasks using Spring Framework with selected database and Spring Security.

1. Create a page for users to log in. Please distinguish 2 types of users: registered **user** and **administrator** .
2. The **administrator** has access to the page (from previous task list Spring2), where it is possible to add, delete, view, edit products and categories.
3. The **logged in user** has access to the page (view) where there is a table of products that can only be added to the shopping cart, and then go to the view with the cart. The user can go to the cart view or products view at any time.
4. Please store the data from the shopping cart (product **id** and **quantity**) in **cookies**, **each product in a separated cookie** (e.a. cookie "**prod3=2**" let it means product of **id=3** has **quantity 2** in the basket) .
5. **Editing** the shopping cart: the ability to **increase** or **decrease** the amount of the product in the cart and **remove** the product, displaying the amount being the value of the **entire order (updated** after each change).
6. Prepare API controllers for all CRUD operation for products and categories. Test them with a Postman.

Deadline 1: meeting 12 (max 100 points)

Deadline 2: meeting 13 (max 80 points)

Deadline 3: meeting 14 (max 50 points)
