Why Figma?

- It is Free with no time constraints
- It is a Web application, so no download required

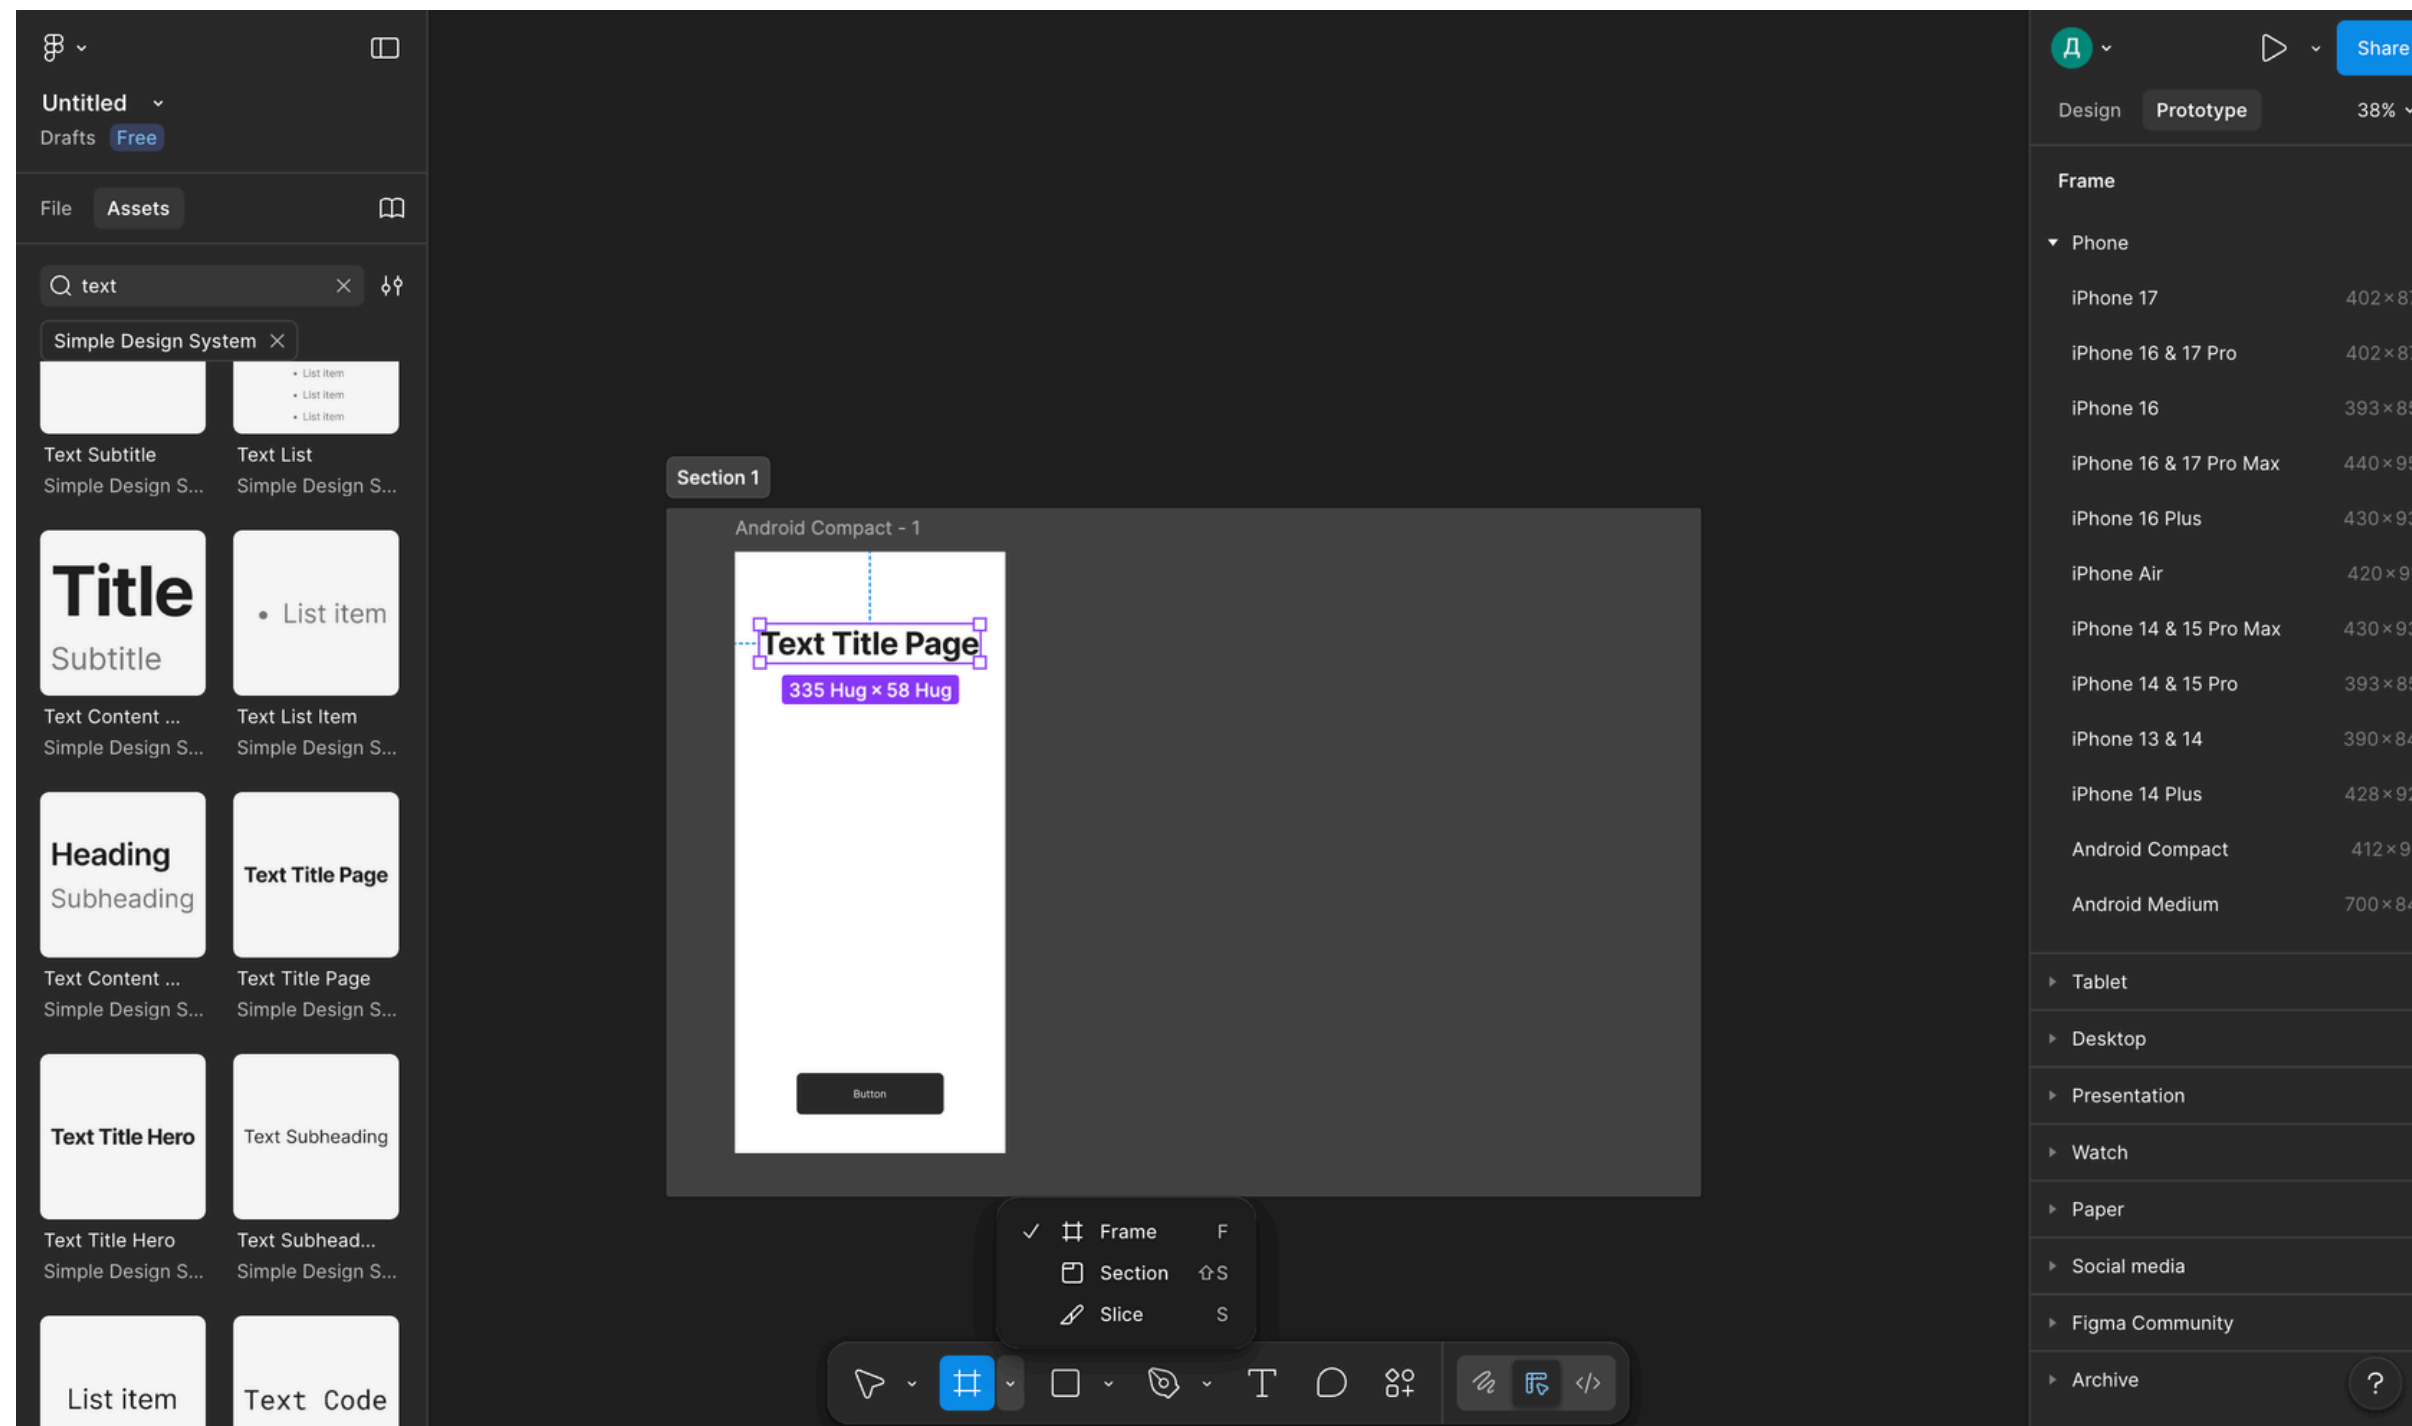

Exercise Example

1. Create phone frame with text and button
2. Create second frame with another text within the same section
3. Connect frames to go from first to second on button click
4. Test in simulation

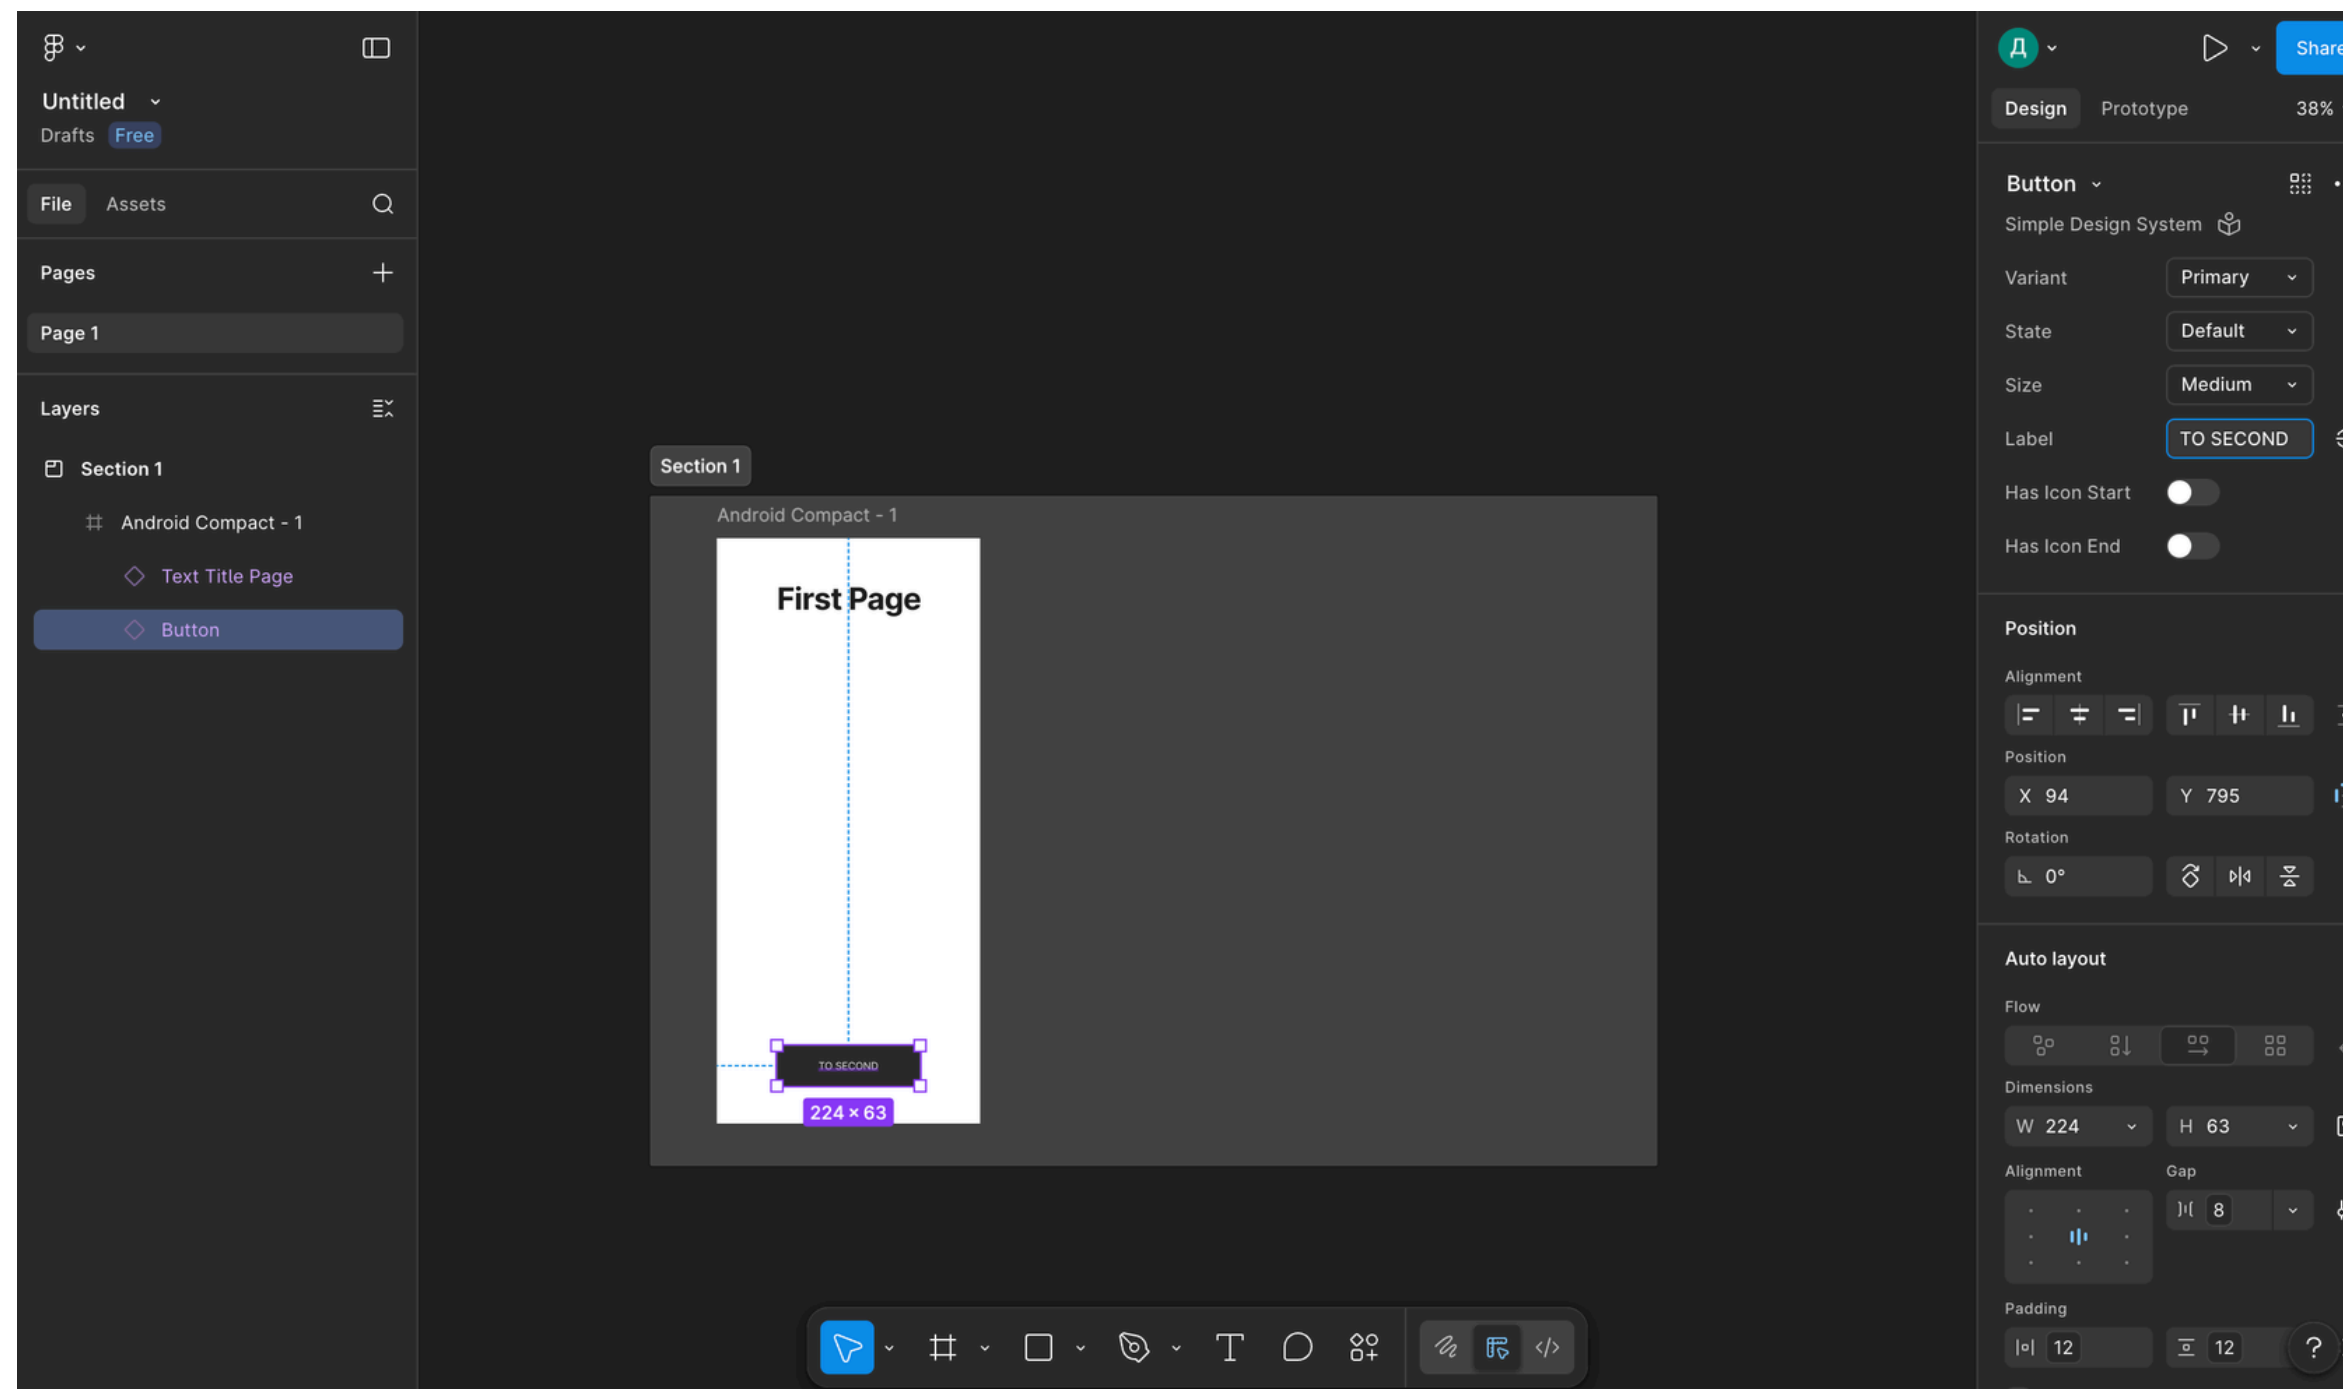

Exercise Example

Exercise (Any frame)

1. Create a login page that has at least username field, password field and login button.(Do not use login form)
2. Create at least 2 screens with tab menu(can be 2 buttons, a button group or navigation button list) to move between them. Screens should have different content (at least 2 elements) but share part for tab menu.
3. Interconnect screens to make navigation

Remember to put screenshots to final report
