

(Lab) Support for IT Project Management – Rules

Main rules:

1. Each student must make one presentation during the course.
2. The teacher assigns students to topics and areas.
3. The presentation is about one of the topics on the list.
4. Each topic consist of:
 - a. a **presentation** during the class
 - b. an **exercise** during the class
 - c. a **report** from the class created and uploaded before the next class
5. The software for a presentation is chosen by students and must be appropriate for a particular topic.
6. The exercise is performed on the software tool chosen by the presenters.
7. Each topic of number 1-13 is assigned to one or two students and covers two areas:
 - a. **specification of functionalities** related to a given topic,
 - b. **comparative price analysis** of the solutions available on the market.
5. Each topic is focused on one tool only, which is chosen by presenter(s).
6. The presentation on the **specification of functionalities** related to a given topic should contain the following elements:
 - a. A List of user needs covered by a specific software category.
 - b. The list of the specific software functionalities including:
 - i. name of the functionality,
 - ii. input and output information of the functionality,
 - iii. description of the purpose of the functionality,
 - iv. the level of significance of a given functionality expressed in the MoSCoW system.
 - c. Motivation for the choice of a particular software including software advantages and price.
7. The presentation on the **specification of functionalities** must be prepared from the perspective of a project manager who specifies his/her functional expectations related to a project and not to particular products available on the market.
8. The presentation on **comparative price analysis** of the solutions available on the market should contain the following elements:
 - a. List of computer programs that have been analysed:
 - i. name of the computer program,
 - ii. type of computer program (web application/standalone)
 - iii. computer program producer or service provider,
 - iv. price of the program.
8. The duration of the presentation should be 45 minutes.
9. The presentation should be followed by a 45 minute exercises including:
 - a. instructions for installing / logging in / starting the test software (preferably a demo available for free in the cloud or software installed in the laboratory),
 - b. "step by step" presentation of a solution to a simple task,
 - c. presenting 1-3 tasks to be performed for all people,
 - d. assistance and supervision over the performance of tasks.
10. All students use the software chosen by presenters.
11. The next week all students (except the presenters) prepare reports after each topic and deliver them in electronic form (in pdf format). The reports will be copied to the instructor's pen drive or to a designated safe place on the network, e.g. the Files directory on MsTeams, Google Drive, ePortal, etc..
12. The report should contain:
 - a. Title page and table of contents
 - b. Name, purpose, functionality of the software used
 - c. Description of performed tasks illustrated with screenshots and reports generated by the application
 - d. Each screenshot is captioned and described in the report

(Lab) Support for IT Project Management – Rules

- e. Summary:
 - i. - software suitability assessment
 - ii. - evaluation of software functionality
 - iii. - user interface evaluation
 - iv. - evaluation of other software attributes
- 13. Failure to deliver a presentation means a 2.0 grade.
- 14. For technical reasons, I am asking that each presenter(s) have their presentations uploaded to the computer of one of the students and connected at the beginning of the topic presentation.
- 15. The final number of points is calculated according to the following rule:

$$P(\text{lab}) = W1 \times F1 + W2 \times F2,$$

where

F1 Assessment for reports on exercises performed on particular topics during the laboratories

F2 Assessment for preparing and conducting classes on the leading topic in a given laboratory

W1 = 0.4

W2 = 0.6

The following number of points can be obtained for:

- presentation: max 144 [points]
- reports: max 144 = 12 [classes] * 12 [points]

which gives:

- total weighted points: max 144 [points]

- 16. The number of points for the laboratory is normalized to the 100 points as the maximal one to form the total number of normalized points for the laboratory.

Topics list:

1. Utilizing software for business process modelling.
2. Utilizing software for requirements management.
3. Utilizing software for system modelling.
4. Utilizing software for interface modelling.
5. Utilizing software to create and maintain a RACI matrix.
6. Utilizing software to schedule an IT project.
7. Utilizing software to assign and account for tasks.
8. Utilizing software to monitor project performance.
9. Utilizing software to communicate within a group.
10. Utilizing software to estimate the total cost of software acquisition and maintenance.
11. Utilizing software for risk management.
12. Utilizing software for configuration management.
13. Utilizing software integrated in cloud computing.
